Set up the camera:

You can customize the camera settings.

After turning on the camera, press the menu button to open the mode menu and access the system settings.

1. Current Mode Submenu
2. System Settings

Using the camera:

Swipe left or right on the screen or press the M key to enter the mode selection page. Swipe to select or use the left/right arrow keys to choose the desired mode, then press the OK button to confirm.

icon	model	illustrate
	Video	Shooting regular videos
	Slow	Shoot high-frame-rate slow-motion videos
	Loop	Continuously record and save the video for a fixed duration
	Lapse	Suitable for static scenes, time-lapse recording captures the passage of time
	Photo	Taking regular photos
	Auto	The camera automatically takes pictures continuously at specific intervals
	Burst	Take multiple photos in quick succession

Insert and format the memory card:

It is recommended to use a Class 10 or faster memory card.

1. Insert the memory card until you hear a "click".

Insert the card in the direction shown in the diagram, paying attention to the edges and corners

2. To remove the memory card, push the memory card in, and it will pop out automatically.

Format the memory card:

It is recommended to format the memory card before first use. To format the memory card, press the Menu button to open the menu system. Then press the left or right button to switch to System Settings. Press the up or down button to find "Format," and then press the OK button to enter the submenu. Select "Confirm" to format the memory card.

Note:

If the memory card format is not supported, a message will appear on the screen: "Unsupported file system, do you want to format it?". After selecting "Confirm" to format the memory card, the camera can be used normally.

Formatting the memory card will delete all data stored on it, and the data will be unrecoverable. Please save any important data to your PC before formatting.
